ProcessVue™
ALARM MANAGEMENT

The ProcessVue Suite of software has been developed with the benefit of over 20 years experience with alarm management systems. The architecture has been designed to allow interfacing with virtually any control system, bringing all data into a standard configurable format, for simple Operator Sequence of Event (SOE) display and high level Key Performance Indicators (KPI) reporting and analysis.
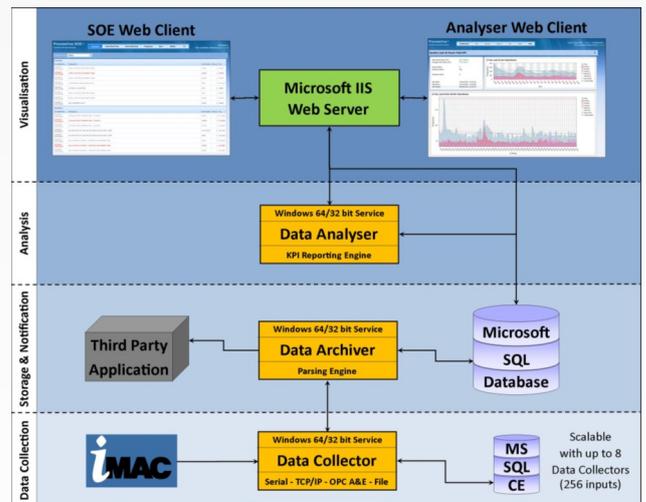

Providing clear, relevant and prioritised information to Operators, Supervisors and Managers is critical to decision making whether in the control room or the board room.

ProcessVue

Designed from the ground up, the ProcessVue system provides a consistent and intuitive user interface across all modules; resulting in shallow learning curves and reduced training costs.

ProcessVue is scalable and can be deployed as a simple printer replacement or as a capable alarm management tool bringing together multiple disparate systems into one common platform. Advanced parsing rules allow even the most complex and variable data types to be formatted into single line meaningful alarm and event messages.

ProcessVue employs open connectivity technologies allowing data to be reconstructed and sent to third party applications as well as using standard SQL database technology. ProcessVue uses the latest Ajax Zero footprint web client technology allowing simple rollout in even the most demanding IT environments.

- Simple printer replacement.
- Advanced KPI Reporting Based on EEMUA 191 Guidelines.
- Sequence Of Event and Real Time Display in a web browser.
- Alarm System Benchmarking.
- Alarm and Event Analysis.
- Alarm and Event Archiving.
- Service based - VM friendly.
- Supports IMAC—the legacy printer replacement package.
